# 1. Product Overview

## 1.1 Introduction of Innodisk mSATA mini 3SE4

Innodisk mSATA mini 3SE4 which is designed with mSATA mini form factor by JEDEC MO-300/MO-300B , supporting SATA III standard (6.0Gb/s), achieves excellent performance up to 4CH standard by cost effective controller with 2CH. Regarding of mechanical interference, Innodisk mSATA mini 3SE4 absolutely replaces the traditional hard disk and makes personal computer, in any field, smaller and easier.

With Innodisk L<sup>3</sup> FW architecture, combining our signature 4K mapping algorithm L<sup>2</sup> FW architecture with powerful LDPC technology, 3SE4 series has outstanding high IOPS, better data integrity and extended lifespan through reducing the bad block number happening.

For real industrial application, 3SE4 series is built in thermal sensor to monitor the environment temperature. iData Guard, the power loss management mechanism developed by Innodisk, ensures data integrity while power sudden loss happened.

## 1.2 Product View and Models

Innodisk mSATA mini 3SE4 is available in follow capacities within SLC flash ICs.

[mSATA mini 3SE4 08GB](#)    [mSATA mini 3SE4 16GB](#)    [mSATA mini 3SE4 32GB](#)

[mSATA mini 3SE4 64GB](#)

**Figure 1: Innodisk mSATA mini 3SE4**

## 1.3 SATA Interface

Innodisk mSATA mini 3SE4 supports SATA III(6.0Gb/s) interface, and compliant with SATA I (1.5Gb/s) and SATA II(3.0Gb/s).

## 2. Product Specifications

### 2.1 Capacity and Device Parameters

mSATA mini 3SE4 device parameters are shown in Table 1.

### 2.4.4 Mean Time between Failures (MTBF)

Table 7 summarizes the MTBF prediction results for various mSATA mini 3SE4 configurations. The analysis was performed using a RAM Commander™ failure rate prediction.

- **Failure Rate:** The total number of failures within an item population, divided by the total number of life units expended by that population, during a particular measurement interval under stated condition.
- **Mean Time between Failures (MTBF):** A basic measure of reliability for repairable items: The mean number of life units during which all parts of the item perform within their specified limits, during a particular measurement interval under stated conditions.

**Table 7: mSATA mini 3SE4 MTBF**

Product	Condition	MTBF (Hours)
Innodisk mSATA mini 3SE4	Telcordia SR-332 GB, 25°C	>3,000,000

## 2.5 CE and FCC Compatibility

mSATA mini 3SE4 conforms to CE and FCC requirements.

## 2.6 RoHS Compliance

mSATA mini 3SE4 is fully compliant with RoHS directive.

## 2.7 Reliability

16GB	937.5	585.93
32GB	1,875	1,171.88
64GB	3,750	2,343.75

\* Note:

1. Sequential: Mainly sequential write, tested by Vdbench.
2. Client: Follow JESD218 Test method and JESD219A Workload, tested by ULINK. (The capacity lower than 64GB client workload is not specified in JEDEC219A, the values are estimated.)
3. Based on out-of-box performance.

## 2.8 Transfer Mode

mSATA mini 3SE4 support following transfer mode:

Serial ATA III 6.0Gbps

Serial ATA II 3.0Gbps

Serial ATA I 1.5Gbps

## 2.9 Pin Assignment

Innodisk mSATA mini 3SE4 uses a standard SATA pin-out. See Table 8 for mSATA mini 3SE4 pin assignment.

## 2.10 Mechanical Dimensions

## 2.11 Assembly Weight

An Innodisk mSATA mini 3SE4 within flash ICs, 64GB's weight is 3.54 grams approximately.

## 2.12 Seek Time

Innodisk mSATA mini 3SE4 is not a magnetic rotating design. There is no seek or rotational latency required.

## 2.13 NAND Flash Memory

Innodisk mSATA mini 3SE4 uses Single Level Cell (SLC) NAND flash memory, which is non-volatility, high reliability and high speed memory storage. Read or Write data to flash memory for SSD is control by microprocessor.

## 3. Theory of Operation

### 3.1 Overview

Figure 2 shows the operation of Innodisk mSATA mini 3SE4 from the system level, including the major hardware blocks.

**Figure 2: Innodisk mSATA mini 3SE4 Block Diagram**

Innodisk mSATA mini 3SE4 integrates a SATA III controller and NAND flash memories. Communication with the host occurs through the host interface, using the standard ATA protocol. Communication with the flash device(s) occurs through the flash interface.

### 3.2 SATA III Controller

Innodisk mSATA mini 3SE4 is designed with 88NV1120, a SATA III 6.0Gbps (Gen. 3) controller. The Serial ATA physical, link and transport layers are compliant with Serial ATA Gen 1, Gen 2 and Gen 3 specification (Gen 3 supports 1.5Gbps/3.0Gbps/6.0Gbps data rate). The controller has 2 channels for flash interface.

### 3.3 Error Detection and Correction

Innodisk mSATA mini 3SE4 is designed with hardware LDPC ECC engine with hard-decision and Soft-decision decoding. Low-density parity-check (LDPC) codes have excellent error correcting performance close to the Shannon limit when decoded with the belief-propagation (BP) algorithm using soft-decision information.

### 3.4 Wear-Leveling

Flash memory can be erased within a limited number of times. This number is called the **erase cycle limit** or **write endurance limit** and is defined by the flash array vendor. The erase cycle limit applies to each individual erase block in the flash device.

Innodisk mSATA mini 3SE4 uses a static wear-leveling algorithm to ensure that consecutive writes of a specific sector are not written physically to the same page/block in the flash. This spreads flash media usage evenly across all pages, thereby extending flash lifetime.

### 3.5 Bad Blocks Management

Bad Blocks are blocks that contain one or more invalid bits whose reliability are not guaranteed. The Bad Blocks may be presented while the SSD is shipped, or may develop during the life time of the SSD. When the Bad Blocks is detected, it will be flagged, and not be used anymore. The SSD implement Bad Blocks management, Bad Blocks replacement, Error Correct Code to avoid data error occurred. The functions will be enabled automatically to transfer data from Bad Blocks to spare blocks, and correct error bit.

### 3.6 iPower Guard

Unstable power source is a common challenge for the devices in an extreme environment. Hardware-based preventive features will protect the SSD from unstable voltage levels by extending the ramp-up time during startup to ensure that the voltage has stabilized before SSD switching on. In addition, when system shutdown or during a quick restart, the residual voltage can cause issues. It's mitigated by tweaking the hardware to minimize the residual voltage.

### 3.7 Garbage Collection

Garbage collection is used to maintain data consistency and perform continual data cleansing on SSDs. It runs as a background process, freeing up valuable controller resources while sorting good data into available blocks, and deleting bad blocks. It also significantly reduces write operations to the drive, thereby increasing the SSD's speed and lifespan.

### 3.8 Trim

The Trim command is designed to enable the operating system to notify the SSD which pages no longer contain valid data due to erases either by the user or operating system itself. During a delete operation, the OS will mark the sectors as free for new data and send a Trim command to the SSD to mark them as not containing valid data. After that the SSD knows not to preserve the contents of the block when writing a page, resulting in less write amplification with fewer writes to the flash, higher write speed, and increased drive life.

## 4. Installation Requirements

### 4.1 mSATA mini 3SE4 Pin Directions

**Figure 3: Signal Segment and Power Segment**

### 4.2 Electrical Connections for mSATA mini 3SE4

A Serial ATA device may be either directly connected to a host or connected to a host through an adaptor card. The SATA interface has a separate connector for the power supply. Please refer to the pin description for further details.

### 4.3 Device Drive

No additional device drives are required. The Innodisk mSATA mini 3SE4 can be configured as a boot device.
