2.1 Anti-static Precautions

WARNING:

Failure to take ESD precautions during installation may result in permanent damage to the ECN-360A-ULT3 and severe injury to the user.

Electrostatic discharge (ESD) can cause serious damage to electronic components, including the ECN-360A-ULT3. Dry climates are especially susceptible to ESD. It is therefore critical that whenever the ECN-360A-ULT3 or any other electrical component is handled, the following anti-static precautions are strictly adhered to.

- ***Wear an anti-static wristband***: Wearing a simple anti-static wristband can help to prevent ESD from damaging the board.
- ***Self-grounding***: Touch any grounded conducting material before handling the board. During the time the board is handled, frequently touch any conducting materials that are connected to the ground.
- ***Use an anti-static pad***: When configuring the ECN-360A-ULT3, place it on an antic-static pad. This reduces the possibility of ESD damaging the ECN-360A-ULT3.

2.2 Unpacking Precautions

When the ECN-360A-ULT3 is unpacked, please do the following:

- Follow the anti-static precautions outlined in **Section 2.1**.
- Make sure the packing box is facing upwards so the ECN-360A-ULT3 does not fall out of the box.
- Make sure all the components shown in **Section 2.3** are present.

2.3 1Unpacking Checklist

NOTE:

If some of the components listed in the checklist below are missing, please do not proceed with the installation. Contact the IEI reseller or vendor you purchased the ECN-360A-ULT3 from or contact an IEI sales representative directly. Installation

3.1 Installation Precautions

During installation, be aware of the precautions below:

- **Read the user manual**: The user manual provides a complete description of the ECN-360A-ULT3, installation instructions and configuration options.
- **DANGER! Disconnect Power**: Power to the ECN-360A-ULT3 must be disconnected during the installation process, or before any attempt is made to access the rear panel. Electric shock and personal injury might occur if the rear panel of the ECN-360A-ULT3 is opened while the power cord is still connected to an electrical outlet.
- **Qualified Personnel**: The ECN-360A-ULT3 must be installed and operated only by trained and qualified personnel. Maintenance, upgrades, or repairs may only be carried out by qualified personnel who are familiar with the associated dangers.
- **Air Circulation**: Make sure there is sufficient air circulation when installing the ECN-360A-ULT3. The ECN-360A-ULT3's cooling vents must not be obstructed by any objects. Blocking the vents can cause overheating of the ECN-360A-ULT3. Leave at least 5 cm of clearance around the ECN-360A-ULT3 to prevent overheating.
- **Grounding**: The ECN-360A-ULT3 should be properly grounded. The voltage feeds must not be overloaded. Adjust the cabling and provide external overcharge protection per the electrical values indicated on the label attached to the back of the ECN-360A-ULT3.

3.2 Hard Disk Drive (HDD) Installation

To install the hard drive, please follow the steps below:

Step 1: Remove four retention screws from the side panel and two retention screws from the bottom panel, and then lift the cover up gently (**Figure 3-1**).

Figure 3-1: Unscrew the Cover

Step 2: Unplug the SATA signal and power cables connected to the ECN-360A-ULT3, and then put the cover on a flat surface (**Figure 3-2**).

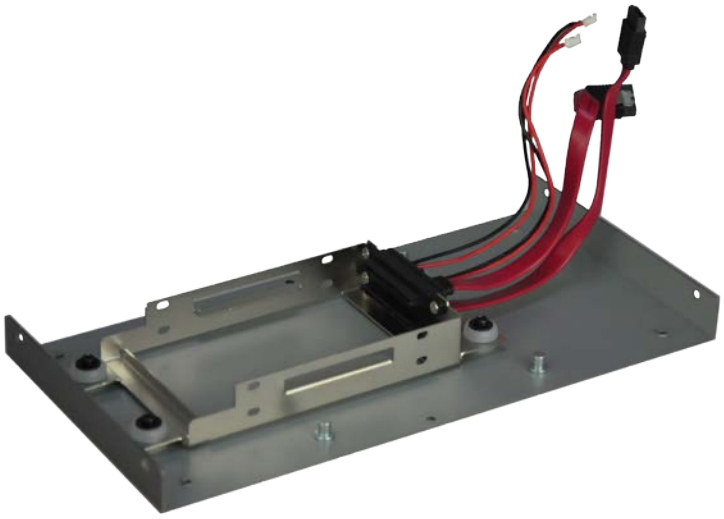

Figure 3-2: Remove the Cover from ECN-360A-ULT3

Step 3: Attach the HDD to the HDD bracket, and then secure the HDD with the HDD bracket by four retention screws (**Figure 3-3**).

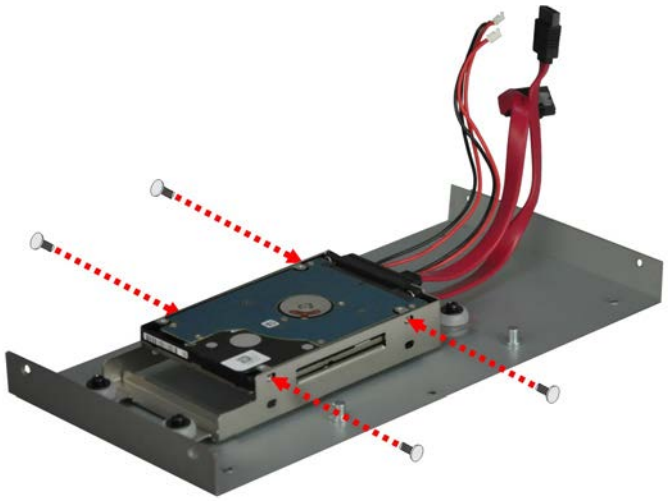

Figure 3-3: HDD Installation

Step 4: Reconnect the SATA signal and power cables to the ECN-360A-ULT3.

Step 5: Reinstall the cover.

3.3 SO-DIMM Installation

WARNING:

Using incorrectly specified SO-DIMM may cause permanently damage the ECN-360A-ULT3. Please make sure the purchased SO-DIMM complies with the memory specifications of the ECN-360A-ULT3.

To install a SO-DIMM into a SO-DIMM socket, please follow the steps below.

Step 1: Remove four retention screws from the side panel and two retention screws from the bottom panel, and then lift the cover up gently (**Figure 3-1**).

Step 2: Locate the SO-DIMM socket on the motherboard (**Figure 3-4**).

Figure 3-4: SO-DIMM Socket

Step 3: Align the SO-DIMM with the socket. The SO-DIMM must be oriented in such a way that the notch in the middle of the SO-DIMM must be aligned with the plastic bridge in the socket (**Figure 3-5**).

Step 4: Push the SO-DIMM into the socket at an angle (**Figure 3-5**).

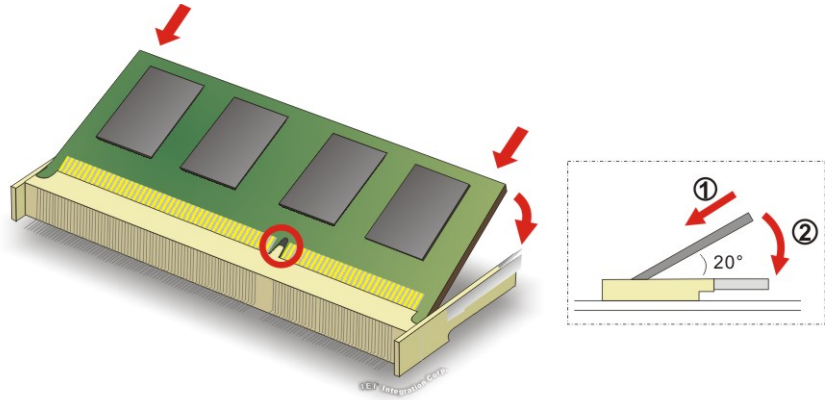

Figure 3-5: SO-DIMM Installation

Step 5: Gently pull the arms of the SO-DIMM socket out and push the rear of the SO-DIMM down (**Figure 3-5**).

Step 6: Release the arms on the SO-DIMM socket. They clip into place and secure the SO-DIMM in the socket.

Step 7: Reinstall the cover that was previously removed in the same position it was before.

3.4 Mounting the System with Mounting Brackets

To mount the embedded system onto a wall or some other surface using the two mounting brackets, please follow the steps below.

Step 1: Turn the embedded system over.

Step 2: Align the two retention screw holes in each bracket with the corresponding retention screw holes on the sides of the bottom surface (**Figure 3-6**).

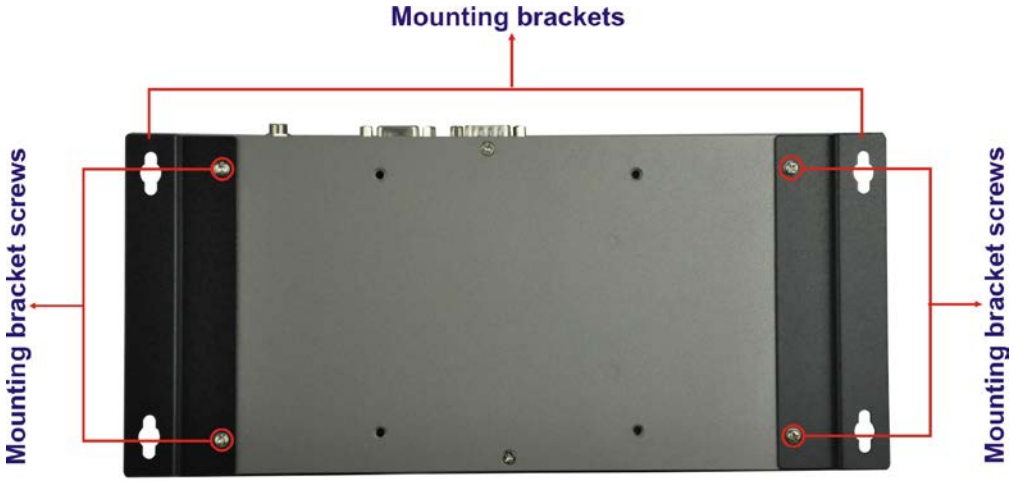

Figure 3-6: Mounting Bracket Retention Screws

Step 3: Secure the brackets to the system by tightening two retention screws into each bracket (**Figure 3-6**).

Step 4: Drill holes in the intended installation surface.

Step 5: Align the mounting holes in the sides of the mounting brackets with the predrilled holes in the mounting surface.

Step 6: Insert four retention screws, two in each bracket, to secure the system to the wall.

3.5 Powering On/Off the System

WARNING:

Make sure a power supply with the correct input voltage is being fed into the system. Incorrect voltages applied to the system may cause damage to the internal electronic components and may also cause injury to the user.

- **Power on** the system: press the power button for 3 second
- **Power off** the system: press the power button for 6 second

➔ **Auto mode fan start temperature [50]**

WARNING:

Setting this value too high may cause the fan to rotate at full speed only when the CPU is at a very high temperature and therefore cause the system to be damaged.

The **Auto mode fan start temperature** option can only be set if the **SYS_FAN1 Smart Fan Control** option is set to **Auto Mode**. If the system temperature is between **Start Temperature** and **Off Temperature**, the fan speed change to be **Start PWM**. To set a

value, select the **Auto mode fan start temperature** option and enter a decimal number between 1 and 100.

➔ **Auto mode fan off temperature [40]**

WARNING:

Setting this value too high may cause the fan to speed up only when the CPU is at a very high temperature and therefore cause the system to be damaged.

The **Auto mode fan off temperature** option can only be set if the **SYS_FAN1 Smart Fan control** option is set to **Auto Mode**. If the system temperature is lower than **Auto mode fan off temperature**, the fan speed change to be lowest. To set a value, select the **Auto mode fan off temperature** option and enter a decimal number between 1 and 100.

➔ **Auto mode fan start PWM [30]**

The **Auto mode fan start PWM** option can only be set if the **SYS_FAN1 Smart Fan control** option is set to **Auto Mode**. Use the **Auto mode fan start PWM** option to set the PWM start value. Safety Precautions

B.1 Safety Precautions

WARNING:

The precautions outlined in this appendix should be strictly followed. Failure to follow these precautions may result in permanent damage to the ECN-360A-ULT3.

Please follow the safety precautions outlined in the sections that follow:

B.1.1 General Safety Precautions

Please ensure the following safety precautions are adhered to at all times.

- ***Make sure the power is turned off and the power cord is disconnected*** when moving, installing or modifying the system.
- ***Do not apply voltage levels that exceed the specified voltage range***. Doing so may cause fire and/or an electrical shock.
- ***Electric shocks can occur*** if opened while still powered on.
- ***Do not drop or insert any objects*** into the ventilation openings.
- ***If considerable amounts of dust, water, or fluids enter the system***, turn off the power supply immediately, unplug the power cord, and contact the system vendor.
- **DO NOT**:
  - Drop the system against a hard surface.
  - In a site where the ambient temperature exceeds the rated temperature

B.1.2 Anti-static Precautions

WARNING:

Failure to take ESD precautions during the installation of the ECN-360A-ULT3 may result in permanent damage to the ECN-360A-ULT3 and severe injury to the user.

Electrostatic discharge (ESD) can cause serious damage to electronic components, including the ECN-360A-ULT3. Dry climates are especially susceptible to ESD. It is therefore critical that whenever the ECN-360A-ULT3 is opened and any of the electrical components are handled, the following anti-static precautions are strictly adhered to.

- ***Wear an anti-static wristband***: Wearing a simple anti-static wristband can help to prevent ESD from damaging any electrical component.
- ***Self-grounding***: Before handling any electrical component, touch any grounded conducting material. During the time the electrical component is handled, frequently touch any conducting materials that are connected to the ground.
- ***Use an anti-static pad***: When configuring or working with an electrical component, place it on an antic-static pad. This reduces the possibility of ESD damage.
- ***Only handle the edges of the electrical component***: When handling the electrical component, hold the electrical component by its edges.

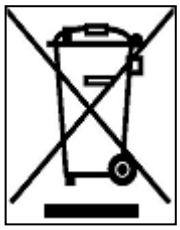
B.1.3 Product Disposal

CAUTION:

Risk of explosion if battery is replaced by and incorrect type. Only certified engineers should replace the on-board battery.

Dispose of used batteries according to instructions and local regulations.

- Outside the European Union - If you wish to dispose of used electrical and electronic products outside the European Union, please contact your local authority so as to comply with the correct disposal method.
- Within the European Union – The device that produces less waste and is easier to recycle is classified as electronic device in terms of the European Directive 2012/19/EU (WEEE), and must not be disposed of as domestic garbage.



EU-wide legislation, as implemented in each Member State, requires that waste electrical and electronic products carrying the mark (left) must be disposed of separately from normal household waste. This includes monitors and electrical accessories, such as signal cables or power cords. When you need to dispose of your device, please follow the guidance of your local authority, or ask the shop where you purchased the product. The mark on electrical and electronic products only applies to the current European Union Member States.

Please follow the national guidelines for electrical and electronic product disposal.

B.2 Maintenance and Cleaning Precautions

When maintaining or cleaning the ECN-360A-ULT3, please follow the guidelines below.

B.2.1 Maintenance and Cleaning

Prior to cleaning any part or component of the ECN-360A-ULT3, please read the details below.

- The interior of the ECN-360A-ULT3 does not require cleaning. Keep fluids away from the ECN-360A-ULT3 interior.
- Be cautious of all small removable components when vacuuming the ECN-360A-ULT3.
- Turn the ECN-360A-ULT3 off before cleaning the ECN-360A-ULT3.
- Never drop any objects or liquids through the openings of the ECN-360A-ULT3.
- Be cautious of any possible allergic reactions to solvents or chemicals used when cleaning the ECN-360A-ULT3.
- Avoid eating, drinking and smoking within vicinity of the ECN-360A-ULT3.

B.2.2 Cleaning Tools

Some components in the ECN-360A-ULT3 may only be cleaned using a product specifically designed for the purpose. In such case, the product will be explicitly mentioned in the cleaning tips. Below is a list of items to use when cleaning the ECN-360A-ULT3.

- □***Cloth*** – Although paper towels or tissues can be used, a soft, clean piece of cloth is recommended when cleaning the ECN-360A-ULT3.
- ***Water or rubbing alcohol*** – A cloth moistened with water or rubbing alcohol can be used to clean the ECN-360A-ULT3.
- ***Using solvents*** – The use of solvents is not recommended when cleaning the ECN-360A-ULT3 as they may damage the plastic parts.
- ***Vacuum cleaner*** – Using a vacuum specifically designed for computers is one of the best methods of cleaning the ECN-360A-ULT3. Dust and dirt can restrict the airflow in the ECN-360A-ULT3 and cause its circuitry to corrode.
- ***Cotton swabs*** - Cotton swaps moistened with rubbing alcohol or water are excellent tools for wiping hard to reach areas.
- ***Foam swabs*** - Whenever possible, it is best to use lint free swabs such as foam swabs for cleaning.

Watchdog Timer

NOTE:

The following discussion applies to DOS environment. Contact IEI support or visit the IEI website for specific drivers for other operating systems.

The Watchdog Timer is provided to ensure that standalone systems can always recover from catastrophic conditions that cause the CPU to crash. This condition may have occurred by external EMIs or a software bug. When the CPU stops working correctly, Watchdog Timer either performs a hardware reset (cold boot) or a Non-Maskable Interrupt (NMI) to bring the system back to a known state.

A BIOS function call (INT 15H) is used to control the Watchdog Timer.

INT 15H:

AH – 6FH Sub-function:	
AL – 2:	Sets the Watchdog Timer's period.
BL:	Time-out value (Its unit-second is dependent on the item "Watchdog Timer unit select" in CMOS setup).

Table C-1: AH-6FH Sub-function

Call sub-function 2 to set the time-out period of Watchdog Timer first. If the time-out value is not zero, the Watchdog Timer starts counting down. When the timer value reaches zero, the system resets. To ensure that this reset condition does not occur, calling sub-function 2 must periodically refresh the Watchdog Timer. However, the watchdog timer is disabled if the time-out value is set to zero.

A tolerance of at least 10% must be maintained to avoid unknown routines within the operating system (DOS), such as disk I/O that can be very time-consuming.

NOTE:

When exiting a program it is necessary to disable the Watchdog Timer, otherwise the system resets.

EXAMPLE PROGRAM:
