## 8. SDRAM Absolute Maximum Ratings

Symbol	Parameter	Rating	Units	Note	
T <sub>OPER</sub>	Operation Temperature	Normal Operating Temp.	-40 to 85	°C	1,2
		Extended Temp.(optional)	85 to 95	°C	1,3

V <sub>DDQ</sub>	Voltage on VDDQ supply relative to V <sub>SS</sub>	-0.3 to +1.5	V	4,6	

### Note:

1. Operating Temperature T<sub>OPER</sub> is the case surface temperature on the center / top side of the DRAM.

For measurement conditions, please refer to the JEDEC document JESD51-2.

2. The Normal Temperature Range specifies the temperatures where all DRAM specifications will be supported. During operation, the DRAM case temperature must be maintained between 0 to 85 °C under all operating conditions.

3. Some applications require operation of the DRAM in the Extended Temperature Range between 85 °C and 95 °C case temperature. Full specifications are supported in this range, but the following additional conditions apply:

- a) Refresh commands must be doubled in frequency, therefore reducing the Refresh interval tREFI to 3.9 μs. It is also possible to specify a component with 1X refresh (tREFI to 7.8μs) in the Extended Temperature Range. Please refer to supplier data sheet and/or the DIMM SPD for option availability.
- b) If Self-Refresh operation is required in the Extended Temperature Range, then it is mandatory to either use the Manual Self-Refresh mode with Extended Temperature Range capability (MR2 A6 =0b and MR2 A7 = 1b) or enable the optional Auto Self-Refresh mode (MR2 A6 = 1b and MR2 A7 =0b). Please refer to the supplier data sheet and/or the DIMM SPD for Auto Self-Refresh option availability, Extended Temperature Range support and tREFI requirements in the Extended Temperature Range.

4. Stresses greater than those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is stress rating only, and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

5. Storage Temperature is the case surface temperature on the center/top side of the DRAM. For the measurement conditions, please refer to JESD51-2 standard.

6. VDD and VDDQ must be within 300 mV of each other at all times;and VREF must be not greater than 0.6 x VDDQ, When VDD and VDDQ are less than 500 mV; VREF may be equal to or less than 300 mV

## 9. Module Absolute Maximum Ratings

Symbol	Parameter	Rating	Units	Notes
$V_{IN}, V_{OUT}$	Voltage on I/O pins relative to Vss	-0.3 to +1.5	V	
$V_{DD}$	Voltage on VDD supply relative to Vss	-0.3 to +1.5	V	1
$V_{DDQ}$	Voltage on VDDQ supply relative to Vss	-0.3 to +1.5	V	1
$V_{PP}$	Voltage on VPP supply relative to Vss	-0.3 to +3.0	V	2

Note:

- VDDQ tracks with VDD; VDDQ and VDD are tied together.
- VPP must be greater than or equal to VDD at all times.

## 10. Operating Condition

Symbol	Parameter	Min	Nom	Max	Units	Notes
VDD	Supply Voltage	1.14	1.2	1.26	V	1

VTT	Termination Voltage	0.49 x VDD	0.5 x VDD	0.51 x VDD	V	4
II	Input leakage current; any input excluding ZQ; 0V < VIN < 1.1V	-2.0	-	2.0	μA	5
II/O	DQ leakage; 0V < Vin < VDD	-4.0	-	4.0	μA	5
IOzpd	Output leakage current; VOUT = VDD; DQ is disabled	-	-	5.0	μA	
IOzpu	Output leakage current; VOUT =VSS; DQ and ODT are disabled; ODT is disabled with ODT input HIGH	-	-	5.0	μA	
IVREFCA	VREFCA leakage; VREFCA = VDD/2 (after DRAM is initialized)	-2.0	-	2.0	μA	

**Note:**

- VDDQ tracks with VDD; VDDQ and VDD are tied together.
- VPP must be greater than or equal to VDD at all times.
- VREFCA must not be greater than 0.6 x VDD. When VDD is less than 500mV, VREF may be less than or equal to 300mV.
- VTT termination voltages in excess of the specification limit adversely affect the voltage margins of command and address signals and reduce timing margins.
- Multiply by the number of DRAM die on the module.
- Tied to ground. Not connected to edge connector.
