Introduction

Product Description

The IB892-10T (Atom E640T, 1.0GHz) and IB892-13T (Atom E660T 1.6GHz) are 3.5-inch disk size SBCs that support wide operating temperature [- 40 ~ +85 degree C]. They are based on the Intel® EG20T I/O Hub and come on board with 1GB DDRII-800 addressable memory

IB892-10T/13T SBC supports and integrated graphics controller with an LVDS interface (18/24-bit single channel). CRT output is available with the use of SDVO (Chrontel 7022A). The boards also have Gigabit LAN connectivity.

High speed communication and external connections are provided by 4 USB ports, high definition audio, Mini PCI-e, 4 COM ports - with COM1 supporting RS232/422/485 while others RS232, RJ45, CRT, Micro SD slot, CAN Bus, SATA and a CFast socket.

Checklist

Your IB892 package should include the items listed below.

- The IB892 3.5" disk-size SBC
- This User's Manual
- 1 CD containing chipset drivers and flash memory utility
- Options:
 - Cable kit (IB65: PW87, USB2-2, PK1H, SATA12, AUDIO-18)
 - Heatsink

Optional Cables for IB892

IB892 Specifications

Product Name	IB892-10T(Atom™ E640T, 1.0GHz) IB892-13T(Atom™ E660T, 1.6GHz) ["T" means support Wide-Temp Operating- 40 ~ +85 degree C]
Form Factor	3.5" Disk Size
CPU Type	Intel® Atom™ E6xx series processor (45nm SC) FCBGA-676 balls (22 x 22 mm; TDP=2.7~3.3W)
CPU Speed	Intel® Atom™ E640T [1.0GHz(TDP=3.3W)] Intel® Atom™ E660 T [1.3GHz(TDP=3.6W)]
CPU FSB	800MHz
Cache	512KB
BIOS	AMI BIOS, supports ACPI Function
Chipset	Intel® EG20T I/O Hub (-40 to +85 degree C) PBGGA-376 balls (23 x 23 mm; TDP = 2W)
Memory	DDRII-800 addressable memory 1GB onboard (single channel) [128MBx8 SDRAM x 8 pcs]
Display	Integrated 2D/3D Graphics@320MHz (600MHz)@400MHz (1.3GHz) ● LVDS - 18/24-bit (Single channel) ● CRT - Thru SDVO by using Chrontel 7022A
LAN	Intel® PCI-e GbE LAN 82574IT x 1
USB	Intel® EG20T IOH built-in USB2.0 host controller with 4 ports
Audio	Intel® Atom™ E6xx series built-in HD Audio +Realtek ALC 662 5.1-Channel (Line-in, Line-out & MIC)
Expansion slot	Mini PCI-e x1 w/USB [Reserved one mounting hole only for half-sized]
SATA	Intel® EG20T IOH built-in SATAII x 1
LPC I/O	Nuvoton NCT6627UD - COM1 (RS232/422/485), COM2(RS232), - COM3(RS232) & COM4(RS232) w/ pin-9 with power for 2 ports (500 mA for each port) - Hardware monitor (3 thermal inputs, 6 voltage monitor inputs)
RTC/CMOS	Intel® EG20T built-in with onboard Lithium Battery
Edge Connector	RJ45 x 1 for GbE DB15 connector x 1 for CRT Dual USB stack connector x1 for USB1,2 DB9 x 1 for COM 1
On Board Header / Connectors	2x4 pin header x 1 for 2* USB ports LVDS (DF13 x 1), 24-bit single channel Mini PCI-e connector x 1 (Reserved screw holes for Half-Mini type also) Micro SD slot x 1 2 x 6 pin box header x1 for Audio 2 x 4 pin DF11 x1 for KB/MS DF11-10 pin box header x 1 for COM2 DF11-20 pin box header x 1 for COM3, COM4 2x5 pin headers x 1 for LPC (80 port card debugging purpose) 3 pin headers x 1 for CAN Bus 2 pin headers x 1 for DC power-in 4-pin power connector x 1 for SATAII HDD CFast Socket x 1 (aligned with PCB edge) 4 pin box header x 1 for backlight/brightness control
Digital I/O	4 in/4 out
Watchdog Timer	Yes (256 segments, 0, 1, 2...255. sec/min)
Operating Temp.	-40 degree C to + 75 degree C for Wide-Temp.
Power Connector	+12V DC-in
Board Size	102x147mm (4"x5.8")

Board Dimensions

Installations

This section provides information on how to use the jumpers and connectors on the IB892 in order to set up a workable system. The topics covered are:

Setting the Jumpers.....	6
Connectors on IB892.....	10

Setting the Jumpers

Jumpers are used on IB892 to select various settings and features according to your needs and applications. Contact your supplier if you have doubts about the best configuration for your needs. The following lists the connectors on IB892 and their respective functions.

Jumper Locations on IB892	7
JP2: ATX or AT Power Selection	8
JP3: LCD Panel Power Selection	8
JP4, JP5: COM3,4 RS232 +5V/+12V Power Setting	8
JP6, JP7, JP8: RS232/422/485 (COM1) Selection.....	9

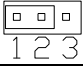

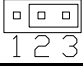

Jumper Locations on IB892

J5: System Function Connector

ATX Power ON Switch: Pins 1 and 2

This 2-pin connector is an “ATX Power Supply On/Off Switch” on the system that connects to the power switch on the case. When pressed, the power switch will force the system to power on. When pressed again, it will force the system to power off.

Hard Disk Drive LED Connector: Pins 3 and 4

This connector connects to the hard drive activity LED on control panel. This LED will flash when the HDD is being accessed.

Pin #	Signal Name
4	HDD Active
3	5V

Reset Switch: Pins 5 and 6

The reset switch allows the user to reset the system without turning the main power switch off and then on again. Orientation is not required when making a connection to this header.

+5V and 5VSB Signals: Pins 7 and 8

Pin #	Signal Name
7	+5V
8	+5VSB

J6: HDD Power Connector

BIOS SETUP

This chapter describes the different settings available in the AMI (American Megatrends, Inc.) BIOS that comes with the board. The topics covered in this chapter are as follows:

BIOS Introduction	18
BIOS Setup	18
Main BIOS Setup	19
Advanced Settings	20
Chipset Settings	26
Audio Controller options	27
Boot Settings	28
Security Settings	29
Save & Exit Settings	30

BIOS Introduction

The BIOS (Basic Input/Output System) installed in your computer system's ROM supports Intel processors. The BIOS provides critical low-level support for a standard device such as disk drives, serial ports and parallel ports. It also provides password protection as well as special support for detailed fine-tuning of the chipset controlling the entire system.

BIOS Setup

The BIOS provides a Setup utility program for specifying the system configurations and settings. The BIOS ROM of the system stores the Setup utility. When you turn on the computer, the BIOS is immediately activated. Pressing the key immediately allows you to enter the Setup utility. If you are a little bit late pressing the key, POST (Power On Self Test) will continue with its test routines, thus preventing you from invoking the Setup. If you still wish to enter Setup, restart the system by pressing the "Reset" button or simultaneously pressing the <Ctrl>, <Alt> and <Delete> keys. You can also restart by turning the system Off and back On again. The following message will appear on the screen:

```
Press <DEL> or <F2> to Enter Setup
```

In general, you press the arrow keys to highlight items, <Enter> to select, the <PgUp> and <PgDn> keys to change entries, <F1> for help and <Esc> to quit.

When you enter the Setup utility, the Main Menu screen will appear on the screen. The Main Menu allows you to select from various setup functions and exit choices.

Main BIOS Setup

This setup allows you to record some basic hardware configurations in your computer system and set the system clock.

					F4: Save & Exit
					ESC: Exit

Note: *If the system cannot boot after making and saving system changes with Setup, the AMI BIOS supports an override to the CMOS settings that resets your system to its default.*

Warning: *It is strongly recommended that you avoid making any changes to the chipset defaults. These defaults have been carefully chosen by both AMI and your system manufacturer to provide the absolute maximum performance and reliability. Changing the defaults could cause the system to become unstable and crash in some cases.*

System Language

Choose the system default language.

System Date

Set the Date. Use Tab to switch between Data elements.

System Time

Set the Time. Use Tab to switch between Data elements.

Advanced Settings

This section allows you to configure and improve your system and allows you to set up some system features according to your preference.

Intel SpeedStep

Enabled or Disable Intel® SpeedStep™

Hyper-Threading

Enabled for Windows XP and Linux (OS optimized for Hyper-Threading Technology) and Disabled for other OS (OS not optimized for Hyper-Threading Technology). When Disabled, only one thread per enabled core is enabled.

Execute Disable Bit

XD can prevent certain classes of malicious buffer overflow attacks when combined with a supporting OS (Windows Server 2003 SP1, Windows XP SP2, SuSE Linux 9.2, RedHat Enterprise 3 Update 3.)

Limit CPUID Maximum

Disabled for Windows XP.

Intel Virtualization Technology

When enabled, a VMM can utilize the additional hardware capabilities provided by Vanderpool Technology.

C-States

Enable or Disable C2 and above

AHCI SATA Configuration

AHCI SATA Device Options Settings

Aptio Setup Utility

Device reset time-out			20 sec	F1: General Help	
Device power-up delay			Auto	F2: Previous Values	
					F3: Optimized Default
					F4: Save ESC: Exit

Legacy USB Support

Enables Legacy USB support.

AUTO option disables legacy support if no USB devices are connected.

DISABLE option will keep USB devices available only for EFI applications.

EHCI Hand-off

This is a workaround for OSes without EHCI hand-off support. The EHCI ownership change should be claimed by EHCI driver.

USB transfer time-out

The time-out value for Control, Bulk, and Interrupt transfers.

Device reset time-out

USB mass storage device Start Unit command time-out.

Device power-up delay

Maximum time the device will take before it properly reports itself to the Host Controller. 'Auto' uses default value: for a Root port it is 100 ms, for a hub port the delay is taken from Hub Descriptor.

NCT6627UD Super IO Configuration

Setup Prompt Timeout

Number of seconds to wait for setup activation key. 65535(0xFFFF) means indefinite waiting.

GateA20 Active

UPON REQUEST – GA20 can be disabled using BIOS services.

ALWAYS – do not allow disabling GA20; this option is useful when any RT code is executed above 1MB.

Option ROM Messages

Set display mode for Option ROM. Options are Force BIOS and Keep Current.

Interrupt 19 Capture

Enable: Allows Option ROMs to trap Int 19.

Boot Option Priorities

Sets the system boot order.

Security Settings

This section allows you to configure and improve your system and allows you to set up some system features according to your preference.

Aptio Setup Utility					
Main	Advanced	Chipset	Boot	Security	Save & Exit
Password Description If ONLY the Administrator's password is set, then this only limits access to Setup and is only asked for when entering Setup. If ONLY the User's password is set, then this is a power on password and must be entered to boot or enter Setup. In Setup the User will have Administrator rights Administrator Password User Password					→ ← Select Screen ↑ ↓ Select Item Enter: Select +- Change Field F1: General Help F2: Previous Values F3: Optimized Default F4: Save & Exit ESC: Exit

Administrator Password

Set Setup Administrator Password.

User Password

Set User Password.

Save & Exit Settings

Aptio Setup Utility					
Main	Advanced	Chipset	Boot	Security	Save & Exit
Save Changes and Exit Discard Changes and Exit Save Changes and Reset Discard Changes and Reset Save Options Save Changes Discard Changes Restore Defaults Save as User Defaults Restore User Defaults Boot Override Launch EFI Shell from filesystem device					→ ← Select Screen ↑ ↓ Select Item Enter: Select +- Change Field F1: General Help F2: Previous Values F3: Optimized Default F4: Save & Exit ESC: Exit

Save Changes and Exit

Exit system setup after saving the changes.

Discard Changes and Exit

Exit system setup without saving any changes.

Save Changes and Reset

Reset the system after saving the changes.

Discard Changes and Reset

Reset system setup without saving any changes.

Save Changes

Save Changes done so far to any of the setup options.

Discard Changes

Discard Changes done so far to any of the setup options.

Restore Defaults

Restore/Load Defaults values for all the setup options.

Save as User Defaults

Save the changes done so far as User Defaults.

Restore User Defaults

Restore the User Defaults to all the setup options.

Boot Override

Pressing ENTER causes the system to enter the OS.

Launch EFI Shell from filesystem device

Attempts to Launch EFI Shell application (Shellx64.efi) from one of the available filesystem devices.

This page is intentionally left blank.

Drivers Installation

This section describes the installation procedures for software and drivers under the **Windows XP**. The software and drivers are included with the motherboard. If you find the items missing, please contact the vendor where you made the purchase. The contents of this section include the following:

Intel Chipset Software Installation Utility	34
Intel Pineview Chipset Family Graphics Driver Installation.....	36
Realtek High Definition Codec Audio Driver Installation	38
Intel 82574L LAN Drivers Installation	39

IMPORTANT NOTE:

After installing your Windows operating system (Windows XP/ Vista/ 7), you must install first the Intel Chipset Software Installation Utility before proceeding with the drivers installation.

Intel Chipset Software Installation Utility

The Intel Chipset Drivers should be installed first before the software drivers to enable Plug & Play INF support for Intel chipset components. Follow the instructions below to complete the installation.

1. Insert the drivers DVD into the DVD drive. Click **Intel** and then **Intel(R)Chipset Software Installation Utility**.

2. When the welcome screen appears, click **Next** to continue.

3. In the Setup Type, choose Complete and click *Next*.

4. Now click **Continue Anyway** to continue the installation.

5. The InstallShield Wizard has finished installing the Intel Platform controller Hub EG20T Drivers. Click *Finish* to exit the wizard.

Intel Pineview Chipset Family Graphics Driver Installation

To install the VGA drivers, follow the steps below to proceed with the installation.

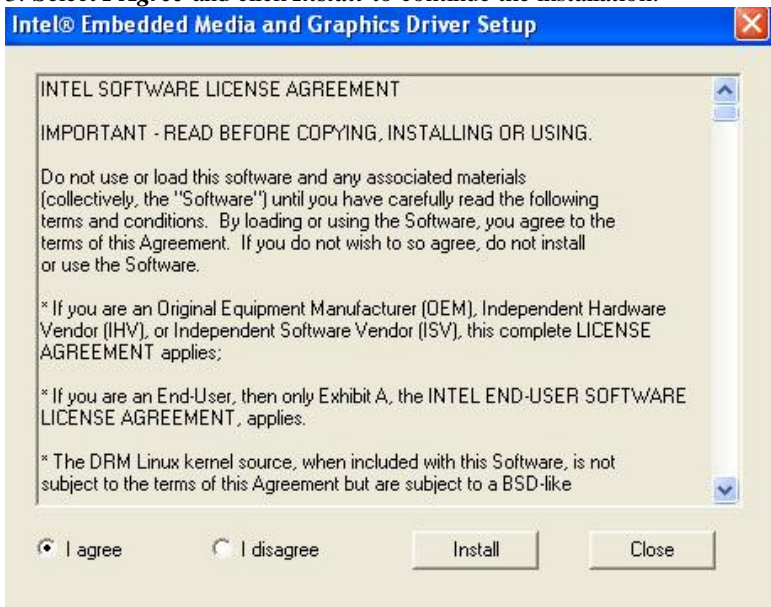

1. Insert the drivers DVD into the DVD drive. Click *Intel* and then *Intel(R) EG20T Graphics Driver*. Then click *CRT Graphics Drivers*.

2. Click *Next* to continue.

3. Select **I Agree** and click **Install** to continue the installation.

4. Click **Next** in the Readme File Information window.

5. Restart the computer when prompted.

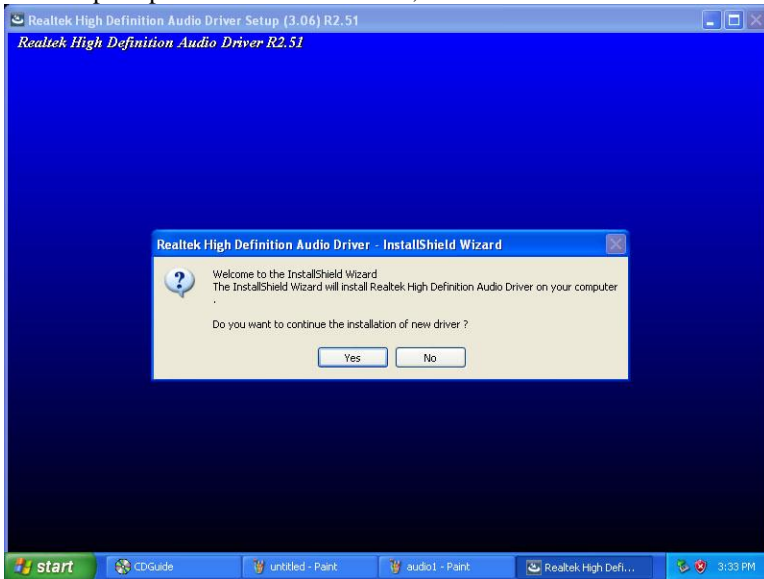

Realtek High Definition Codec Audio Driver Installation

Follow the steps below to install the Realtek HD Codec Audio Drivers.

1. Insert the drivers DVD into the DVD drive. Click *Intel* and then *Realtek High Definition Codec Audio Driver*.

2. When prompted to install the drivers, click *Yes*.

3. When the InstallShield Wizard has finished the installation, restart the computer when prompted.

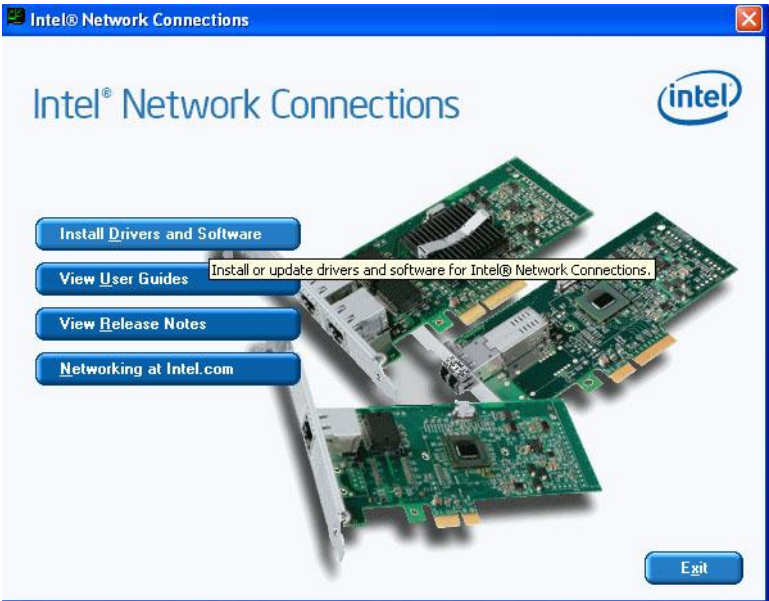

Intel 82574L LAN Drivers Installation

Follow the steps below to install Intel 82574L LAN Drivers.

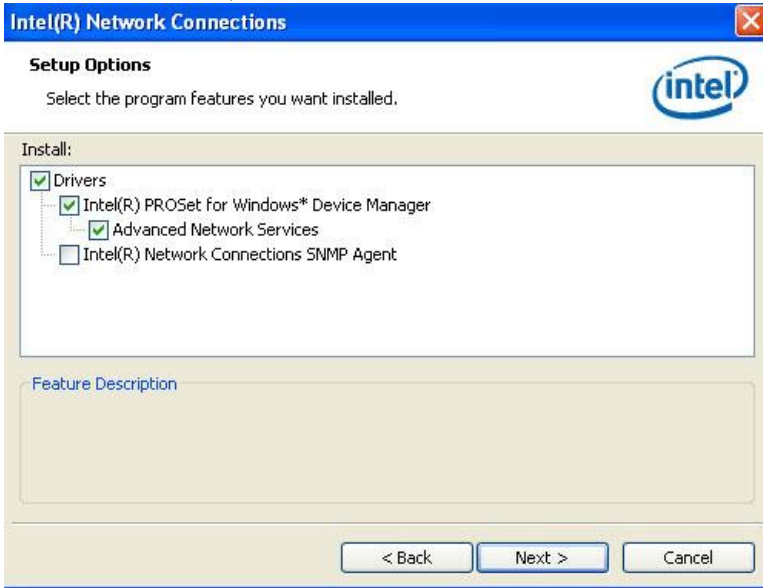

1. Insert the drivers DVD into the DVD drive. Click **Intel** and then **Intel(R) PRO LAN Network Drivers**.

2. On the next screen, select **Install Drivers and Software**.

3. On the next screen, select **Drivers** and click *Next*.

4. InstallShield Wizard completed. Click *Finish* to exit the Wizard.

Appendix

A. I/O Port Address Map

Each peripheral device in the system is assigned a set of I/O port addresses that also becomes the identity of the device. The following table lists the I/O port addresses used.

Address	Device Description
000h - 01Fh	DMA Controller #1
020h - 03Fh	Interrupt Controller #1
040h - 05Fh	Timer
060h - 06Fh	Keyboard Controller
070h - 07Fh	Real Time Clock, NMI
080h - 09Fh	DMA Page Register
0A0h - 0BFh	Interrupt Controller #2
0C0h - 0DFh	DMA Controller #2
0F0h	Clear Math Coprocessor Busy Signal
0F1h	Reset Math Coprocessor
1F0h - 1F7h	IDE Interface
2B0h - 2DFh	Graphics adapter Controller
2E8h - 2EFh	Serial Port #4(COM4)
2F8h - 2FFh	Serial Port #2(COM2)
360h - 36Fh	Network Ports
3B0h - 3BFh	Monochrome & Printer adapter
3C0h - 3CFh	EGA adapter
3D0h - 3DFh	CGA adapter
3E8h - 3EFh	Serial Port #3(COM3)
3F8h - 3FFh	Serial Port #1(COM1)

B. Interrupt Request Lines (IRQ)

Peripheral devices use interrupt request lines to notify CPU for the service required. The following table shows the IRQ used by the devices on board.

Level	Function
IRQ0	System Timer Output
IRQ1	Keyboard
IRQ2	Interrupt Cascade
IRQ3	Serial Port #2
IRQ4	Serial Port #1
IRQ5	Reserved
IRQ6	Reserved
IRQ7	Reserved
IRQ8	Real Time Clock
IRQ9	Reserved
IRQ10	Serial Port #4
IRQ11	Serial Port #3
IRQ12	PS/2 Mouse
IRQ13	80287
IRQ14	Primary IDE

C. Watchdog Timer Configuration

The WDT is used to generate a variety of output signals after a user programmable count. The WDT is suitable for use in the prevention of system lock-up, such as when software becomes trapped in a deadlock. Under these sorts of circumstances, the timer will count to zero and the selected outputs will be driven. Under normal circumstance, the user will restart the WDT at regular intervals before the timer counts to zero.
