This warranty does not apply to any products that have been repaired or altered by persons other than repair personnel authorized by Advantech, or products that have been subject to misuse, abuse, accident, or improper installation. Advantech assumes no liability under the terms of this warranty as a consequence of such events.

Because of Advantech's high quality-control standards and rigorous testing, most customers never need to use our repair service. If an Advantech product is defective, it will be repaired or replaced free of charge during the warranty period. For out-of-warranty repairs, customers will be billed according to the cost of replacement materials, service time, and freight. Please consult your dealer for more details.

If you believe your product to be defective, follow the steps outlined below.

1. Collect all the information about the problem encountered. (For example, CPU speed, Advantech products used, other hardware and software used, etc.) Note anything abnormal and list any onscreen messages displayed when the problem occurs.
2. Call your dealer and describe the problem. Please have your manual, product, and any helpful information readily available.
3. If your product is diagnosed as defective, obtain a return merchandise authorization (RMA) number from your dealer. This allows us to process your return more quickly.
4. Carefully pack the defective product, a completed Repair and Replacement Order Card, and a proof of purchase date (such as a photocopy of your sales receipt) into a shippable container. Products returned without a proof of purchase date are not eligible for warranty service.
5. Write the RMA number clearly on the outside of the package and ship the package prepaid to your dealer.

# Chapter 1

## General Information

This chapter details background information on the ARK-3533 series.

## 1.1 Introduction

Advantech's ARK-3533 is an intelligent, high-performance, fanless desktop system powered by 12/13th Gen. Intel® Core™ LGA1700 and Core™ i3/i5/i7/i9 35W processors. ARK-3533 supports a maximum 35W processor and broad temperature ranges (-20 ~ 60°C / -4 ~ 140°F). It also provides multiple I/O — up to 8 x COM, 4 x GbE, 4 x USB 3.2 (2 x Gen2 + 2 x Gen1), 4 x USB 2.0, 2 x CAN Bus (optional), 1 x M.2 (B-Key), 1 x M.2 (E-Key), 1 x Line out, TPM 2.0 (optional), and 2x 2.5" SATA III hard drive bays.

### Rugged Multi-Functional Design

ARK-3533 adopts an advanced thermal design for its desktop processor solution. All models are fanless, and feature various quality features. These include wide operating temperatures (-20 ~ 60°C / -4 ~ 140°F), diverse expandability options, and structural strengthening. It supports diverse I/O interfaces — up to 4 x Intel® GbE, 4 x USB 3.2 (2 x Gen2 + 2 x Gen1), 4 x USB 2.0, 2 x CAN Bus (optional), 2 x 2.5" HDD, 1 x M.2 (B-Key), 1 x M.2 (E-Key) 4 x RS-232/422/485, and 4 x RS-232 COM ports.

### Built-In Intelligent Management Tools — Advantech SUSI API and WISE-DeviceOn

The Advantech SUSI API provides a valuable suite of programmable APIs such as multi-level watchdog, hardware monitoring, and other user-friendly interfaces.

SUSI API is an intelligent self-management cross-platform tool that monitors the system's status for problems and takes action in the event of abnormalities. SUSI API offers a boot-up guarantee in critical, low-temperature environments so systems can automatically recover when voltages dip. SUSI API makes the entire system more reliable and intelligent. ARK-3533 also supports Advantech's own WISE-DeviceOn, which provides easy remote management so users can monitor, configure, and control a large number of terminals to make maintenance and system recovery simpler.

# Chapter 2

Hardware  
Configuration

## 2.1 Introduction

The following sections show the internal jumper settings and the external connector pin assignments for different applications.

## 2.2 Jumpers

### 2.2.1 Jumper Description

You may configure ARK-3533 to match the needs of your application by setting jumpers. A jumper is a metal bridge used to close an electric circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To close a jumper, you connect the pins with the clip. To open a jumper, remove the clip. Sometimes a jumper will have three pins, labeled 1, 2, and 3. In this case you would connect either pins 1 and 2, or 2 and 3.

The jumper settings are schematically depicted in this manual as follows.

A pair of needle-nose pliers may be helpful when working with jumpers. If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any changes. Generally, you simply need a standard cable to make most connections.

# Chapter 3

## BIOS Settings

## 3.1 Introduction

AMIBIOS has been integrated into motherboards for over two decades. With the AMIBIOS Setup program, users can modify BIOS settings and control various system features. This chapter describes the basic navigation of the ARK-3533 BIOS setup screens.

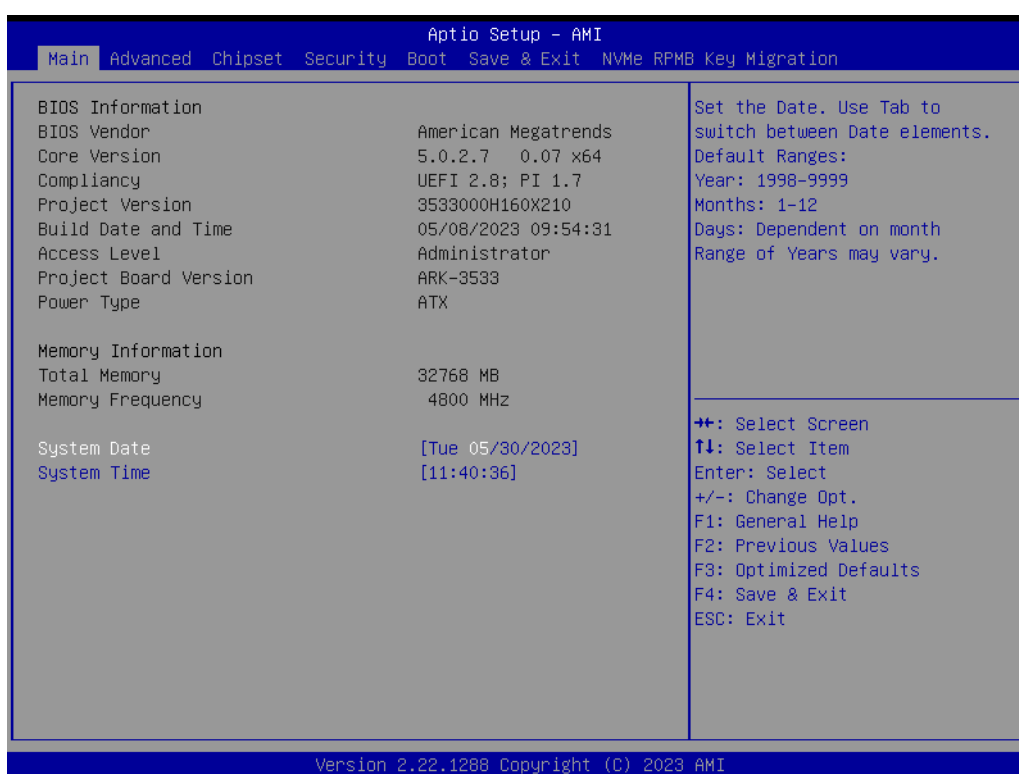

AMI's BIOS ROM has a built-in setup program that allows users to modify the basic system configuration. This information is stored in flash ROM so it retains the setup information when the power is turned off.

## 3.2 Entering Setup

Turn on the computer and check for the patch code. If there is a number assigned to the patch code, it means that BIOS supports your CPU. If there is no number assigned to the patch code, please contact an Advantech application engineer to obtain an up-to-date patch code file. This will ensure that your CPU's system status is valid. After ensuring that you have a number assigned to the patch code, press <DEL> and you will immediately be allowed to enter Setup.

### 3.2.1 Main Setup

When users first enter the BIOS Setup Utility, they will enter the Main setup screen. Users can always return to the Main setup screen by selecting the Main tab. There are two Main Setup options. They are described in this section. The Main BIOS Setup screen is shown below.

The Main BIOS setup screen has two main frames. The left frame displays all the options that can be configured. Grayed-out options cannot be configured; options in blue can. The right frame displays the key legend.

Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often a text message will accompany it.

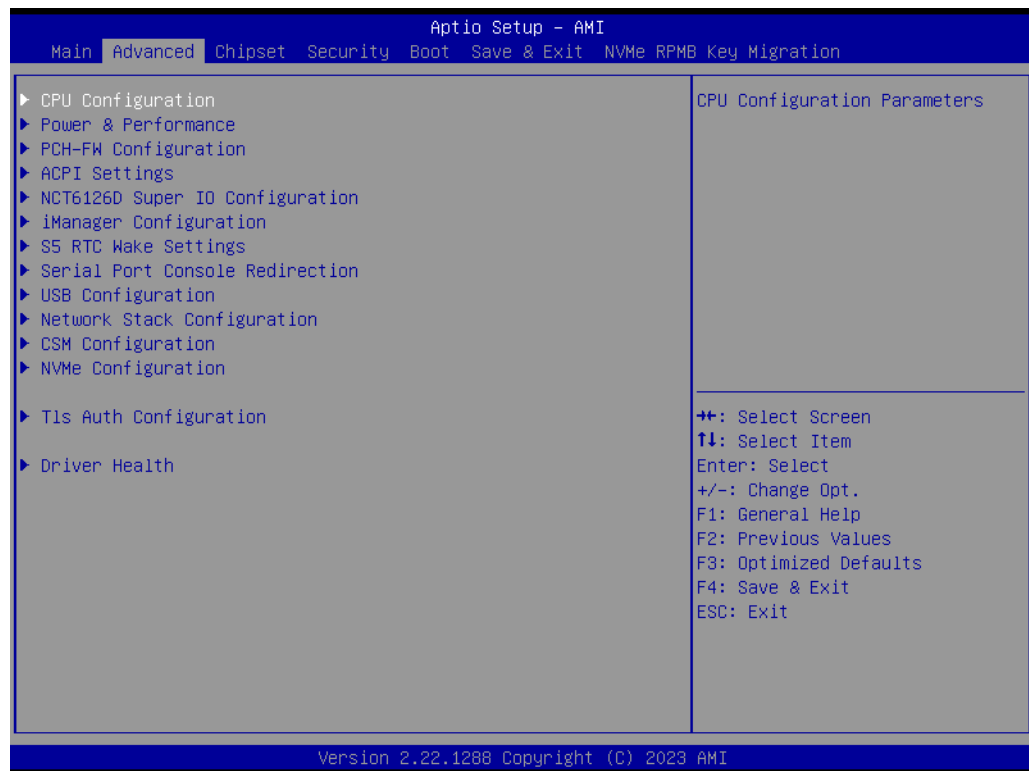

#### ■ System Time / System Date

Use this option to change the system time and date. Highlight System Time or System Date using the <Arrow> keys. Enter new values through the keyboard. Press the <Tab> key or the <Arrow> keys to move between fields. The date must be entered in MM/DD/YY format. The time must be entered in HH:MM:SS format.

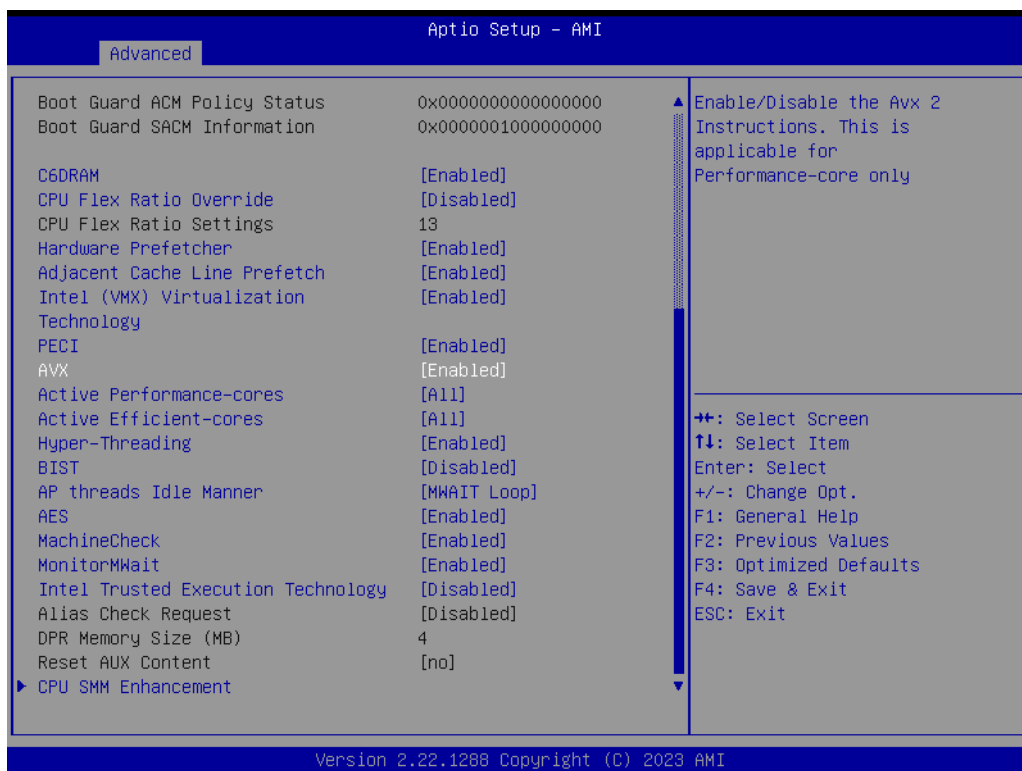

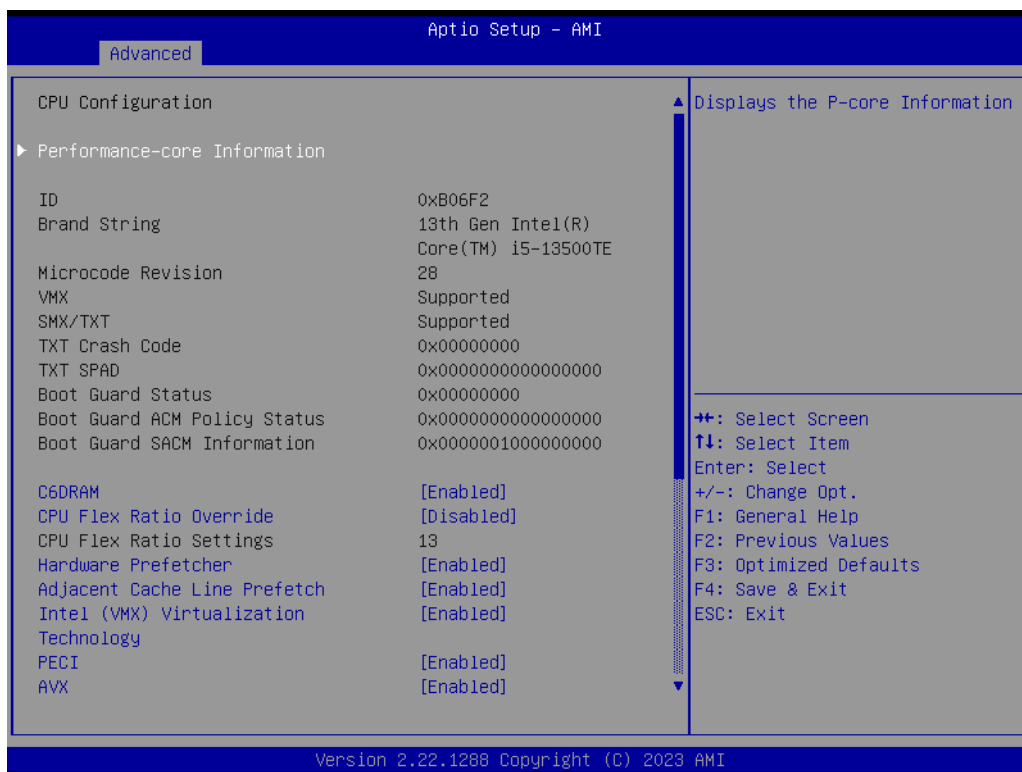

## 3.2.2 Advanced BIOS Features Setup

Select the Advanced tab from the ARK-3533 setup screen to enter the Advanced BIOS Setup screen. Users can select any item in the left frame of the screen, such as CPU Configuration, to go to the sub-menu for that item. Users can display an Advanced BIOS Setup option by highlighting it using the <Arrow> keys. All Advanced BIOS Setup options are described in this section. The Advanced BIOS Setup screens are shown below. The sub-menus are described on the following pages.
