

MIC-78 i-Module Series

Expansion Module for MIC-78 Series

Features

- Flexible expansion via PCIe/PCI slot
- PCIe speed up to Gen5 high speed
- MIC-78 series compatible
- Optional smart fan for thermal optimization
- Provide additional 12Vdc power source for add-on card
- Maximum 85W for add-on card power consumption
- Support 250W power PCIe GPU and 80W MXM GPU by GPU i-Module
- Expansion for 2.5" and 3.5" HDD/SSD bay
- 2 x 2.5" Swappable HDD/SSD supported

Introduction

MIC i-Module Series provide flexible expansion function for MIC-78 Series system. MIC i-Module Series support PCIe/PCI I/F add-on card, such as frame grabber, GPU and motion control cards, etc.. Except for the power from PCIe/PCI slot, i-Module reserves additional 12VDC power via the on-board connector for cards that need more power. To better control over the heat generated from add-on cards, optional system fans are supported with intelligent Smart Fan feature for better thermal management. With additional HDD/SDD bays in i-Module, customer can have more rooms for massive data storage. Removable storage bays are also supported.
